A professional graphic designer uses a tool called Smart Sharpen to make sure that edges of the image or design are not too blurred. It makes design work easier for the users. So, how can you activate this feature? Click on the menu bar and explore Select > Sharpen. Click more on it and adjust the settings based on your preferences. Tip: For a better experience, adjust the sharpening intensity first. You can reduce the intensity until it is just right. Schedule the media you need to use as you watch your favorite video. If you play through iMovie (Opens in a new window) on Windows, you can import media directly from the Organizer and use it as a background to your video (this works with Mac). Start iMovie and choose File > Import for the video you want to use. You can even preset the selected element to give you a quick way to bring in some useful media into your video. If you would like to view the video timeline in iMovie as you work on the project, you can designate it as the Background. You can then view the content in iMovie and make adjustments without worrying that an adjustment made on the content will change how the media is displayed. Your video can open quickly and you can access the media quickly and choose which media you would like to work on before you jump into your work.
