Muthulakshmi Raghavan Novels 852 PDF Free Download.The FBI has launched a major investigation into the Florida school shooting, after a police officer was detained by a teenager carrying a bag that had a "suspicious device". A person off-duty Miami-Dade Police Officer was walking back from an Apple store in nearby Coral Gables when he was flagged down by "a confused young male". The teenager produced a handgun and pointed it at the officer, who then ordered him to drop the weapon. The officer then ordered other officers to the scene, and he and the youth then fled in different directions. These devices are used in industry, in agriculture and in medicine, since they are very safe and non-toxic. They are also used as sensors and as dopants in the manufacture of semiconductors. The chemistry of the interaction between the free radicals produced by X-irradiation and molecules of similar structure can be understood by an example. FIG. 1 shows schematically the structure of the reagent molecule X containing the free radical by which X-radiation is decomposed: ##STR1## This molecule is called paramagnetic and has the following effect on X-radiation: when irradiated, it absorbs some of the energy and after a while releases it again in the form of radiation which has a different energy and escapes from the molecule. Since the reagent molecule is so much smaller than the energy of the radiation absorbed, it can be considered as a point dipole which has an effective charge  $z$ , which is proportional to the number of protons of the reagent molecule  $N$ . The substance is called paramagnetic because it has a magnetic moment which is proportional to the effective charge  $z$ . The paramagnetic reagent molecule X can be formed in the form of a film or a coating applied to a surface of a material. When a certain part of the molecule is radiated, it loses some of its energy and then reverts to the equilibrium state in which the molecule is more stable and in which the molecule is said to be
